**Core Restore Training Method**  
**US Patent Protected**

## Overview of Core Restore Services

Do less. Achieve more.™

### The Value We Provide

The Core Restore philosophy is to *re-teach the body to use the right muscles for the right movements*. We believe that exercise is a continual process that relies on consistent application of strategic methods for improving outcomes. Our entire purpose at Core Restore is to improve the ability of your muscular system to handle external and internal stresses. We do this by utilizing our skills and tools as part of a process focused on increasing proper contraction of your muscular system. Core Restore is your Muscle and Movement Training Specialists.

### Our Services

**Muscle Activation Techniques®** developed by Greg Roskopf. There are hundreds of muscles and joints in the body that require evaluation in order to uncover the muscular issues that may be contributing to the loss of physical performance and associated subjective complaints. The evaluative process includes numerous sessions of work in order to resolve the identified problems. MAT® is a whole-body approach to overall muscle dysfunction.

**The Core Restore Training System** (CRTS™) developed was developed by Chris Verdi, owner and operator of Core Restore. CRTS™ is a patented system specific to muscle movement training. Traditional exercise methods evaluate an individual's progress by assessing whether or not the client can perform certain exercises, poses, or positions. CRTS™ is different because it prepares the client's body for motion by focusing on muscle contraction and muscle awareness in order to improve range of motion.
